

Application of Elimin Plus on Sunflower

Technical information:

Crop – Sunflower, Clearfield hybrid

Date of sowing – 25.04.2022

Climatic conditions – very dry Spring

Purpose of application – to overcome herbicide stress and to prevent sunflower from pathogen attack

Covered area – 600 Hectars, no control

Stage of application – 3-4 couples of leaves

Dosage of application – 3 liters/Ha

Average yield – 2,5-3 tones/Ha (average yield of Sunflower 2022 – 2-2,5 tonnes/Ha)

Conclusion:

Generally, the year was not suitable for sunflower cultivation, mostly because of the drought. Nevertheless, a lot of diseases were present on the sunflower fields all over the country.

The sunflower covered with Eliamin plus, stayed longer green without dead leaves and with also a good turgor of the plants. For this reason, the Farmer didn't apply any fungicide.
